

1. GHG emissions - Ex. 6 Personal Privacy (PP)

Ex. 6 Personal Privacy (PP)

2. Climate change effects in the area - we can discuss the most current resources for that information

3. Adaptation

4. Reasonable mitigation measures

1) NRC did the calculation of GHG's in the SEIS and mentioned upstream. Lisa talked
Ex. 5 Deliberative Process (DP) I have the 2014
report Climate Change Impacts in the United States by the U.S Global Change Research
Program. (The NRC used the 2009 report for their work.) I have already gotten some idea

Ex. 5 Deliberative Process (DP)

2) The report provides info on the climate change effects in the area (Ch 19 is about the Great Plains). Talking about additional references will be helpful. The report says that precipitation events are growing more frequent and more severe in that area. I have seen that effect in the years I have been working on the site.

3) I need some help separating the concepts of adaptation from mitigation measures.

Ex. 5 Deliberative Process (DP)

4) Mitigation measures: The two areas I have identified (with Lisa's help) that I need to address are rate of groundwater recharge and stormwater control. Powertech has designed mitigation measures in their stormwater control plan, Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)
